

### Brief History

•Albanian Society of Nephrology has begun to act as a small formation in 1993, since the number of nephrologists in that period was small. As the number of nephrologists throughout Albania was increased, the Albanian Association of Nephrology was legally formalized in 2003.

•The association organizes annual meeting, with the participation of nephrologists throughout Albania. It organized in collaboration with the European Association of Nephrology two ERA-EDTA CME and joint activities with Regional Associations of Nephrology.

### Albania & Germany Sister Centers Partners - a project of International Society of Nephrology

- The Sister Renal Centers (SRC) partnership between the Service of Nephrology at the University Hospital Center “Mother Teresa”, Faculty of Medicine, UMT, Albania, and the Department of Medicine, Division of Nephrology at the University Hospital in Würzburg, Germany, began in 2020 at Level C (entry-level).
- Once COVID-19-related restrictions were in place, the two teams decided to collaborate through a year-long series of interactive webinars between the centers, in place of the usual training visits. In this project the young nephrologists of Albania would have the possibility to participate in mutual studies.
- In the frame of this Sister Program are organized two webinars in 2020, in which young doctors have been involved with case discussions, Q&A.
