

CME Program

Improving Organ Donation and Transplantation – Current Medical Practices

1. Zoccali Carmine (Italy): *An untold death risk in Kidney failure patients: the risk of not being transplanted - Clinical and financial implications*
2. Delmonico Francis (USA): Current Concerns in Organ Donation and Transplantation - How to achieve self-sufficiency?
3. Coppo Rosanna (Italy): National and regional organization for cadaveric kidney transplantation in adults and children in Italy
4. Spasovski Goce (Macedonia): Current status of transplantation in the Balkans – future perspectives
5. Schena Paolo (Italy): Discussing with the parents of the cadaveric donor: What should we do?
6. Abramowicz Daniel (Belgium): Improving graft survival – an update in current clinical practice- how to treat transplant patients with failing renal function
7. Schena Paolo: Personalized therapy in renal transplantation, including infections and neoplasias.
8. Wiecek Andrzej (Poland): Anemia and erythrocytosis after kidney transplantation – impact on the graft survival?
9. Vanholder Raymond (Gent): New-onset diabetes after transplantation - possible prevention

10. Boletis John (Athens): Current immunosuppressive treatments in glomerular diseases and kidney transplantation – similarities & differences

All lectures 40 min (30 + 10 min discussion)

Meet the expert session (30-40 min in 4 small groups ~15 people):

Rossana Coppo – Organisation of cadaveric transplantation

Paolo Schena – Tailoring immunosuppressive treatment

Daniel Abramowicz – Chronic graft dysfunction

Boletis John – Recurrent GN in renal allografts
