ERA-EDTA Registry Committee

GM London, France (ERA-EDTA President)

C Wanner, Germany (Chairman)

D Ansell, United Kingdom

C Combe, France

L Garneata, Romania

F Jarraya, Tunisia

P Ravani, Italy

R Saracho, Spain

F Schaefer, Germany

S Schön, Sweden

E Verrina, Italy

Registry Office Staff

KJ Jager, senior epidemiologist (Managing Director)

AM van den Broek, data manager

R Cornet, senior medical informatician

FW Dekker, senior epidemiologist

A Kramer, medical informatician

MWM van de Luijtgaarden, epidemiologist

M Noordzij, epidemiologist

VS Stel, epidemiologist

KJ van Stralen, epidemiologist

Acknowledgements

The ERA-EDTA Registry would like to thank the patients and staff of all the dialysis and transplant units who have contributed data via their national and regional renal registries. In addition, we would like to thank the following persons and organizations for their contribution to the work of the ERA-EDTA Registry.

For contribution to Section A

Registry	Contributors
Austria	R Kramar
Belgium, Dutch-speaking	H Augustijn, B De Moor, and J De Meester
Belgium, French-speaking	JM des Grottes and F Collart
Denmark	J Heaf
Finland	P Finne and C Grönhagen-Riska
France (16 of 26 regions)	M Lassalle and C Couchoud
Greece	GA Ioannidis
Iceland	R Palsson
Italy (12 of 20 regions)	A Rustici, M Nichelatti, A Limido, A Molino, M Salomone, G Cappelli, E Arosio, F Antonucci, A Santoro, E Mancini, A Rosati, GM Frascà, G Gaffi, M Standoli, M Bonomini, L DiLiberato, S DiGiulio, A DiNapoli, D Torres, F Casino, C Zoccali, M Postorino, and AM Pinna
Norway	T Leivestad
Romania	G Mircescu, L Garneata, and E Podgoreanu
Spain, Andalusia	P Castro de la Nuez and MA Pérez Valdivia
Spain, Asturias	R Alonso de la Torre, Á Rocés, and E Sánchez
Spain, Basque country	A Magaz, J Aranzabal, I Lampreabe, J Arrieta, M Rodrigo, and I Moina
Spain, Canary Islands	V Lorenzo Sellarés, N Vega Díaz and AP Rodríguez Hernández
Spain, Cantabria	J González Cotorruelo and O García Ruíz
Spain, Castile and Leon	R González and C García-Renedo
Spain, Castile-La Mancha	G Gutiérrez Ávila and I Moreno Alía
Spain, Catalonia	E Arcos, J Comas, R Deulofeu, and J Twose
Spain, Extremadura	JM Ramos Aceitero and MA García Bazaga
Spain, Galicia	E Bouzas-Caamaño and J Sánchez-Ibáñez
Spain, Valencian region	O Zurriaga Llorens and M Ferrer Alamar
Sweden	KG Prütz, L Bäckman, S Schön, A Seeberger, and B Rippe
The Netherlands	A Hoitsma and A Hemke
United Kingdom, England/Northern Ireland/Wales	All the staff of the UK Renal Registry and of the renal units submitting data
United Kingdom, Scotland	All of the Scottish renal units

For contribution to Section B

Registry	Contributors
Bosnia and Herzegovina	H Resić, B Jakovljević, and S Coric
Bulgaria	E Vazelov, V Mushekov, and E Paskalev
Croatia	Croatian Registry for RRT, Croatian Regional Registries for RRT, and Croatian Society for Nephrology, Dialysis and Transplantation
Czech Republic	I Rychlík, J Potucek, and F Lopot
Estonia	M Luman, M Rosenberg, and Ü Pechter
France (20 of 26 regions)	M Lassalle and C Couchoud
FYR of Macedonia	O Stojceva-Taneva
Israel	R Dichtiar, A Berlin, and E Golan
Italy (14 of 20 regions)	A Rustici, JH Leviaidi Ghiron, and M Nichelatti
Latvia	H Cernevsksis and V Kuzema
Montenegro	M Ratkovic and S Ivanovic
Poland	B Rutkowski, G Korejwo, and P Jagodziński
Portugal	F Macário, R Filipe, and F Nolasco
Russia	NA Tomilina and BT Bikbov
Serbia	L Djukanović and N Dimković
Slovakia	V Spustová, I Lajdova, and J Fekete

Turkey	K Serdengeçti and G Süleymanlar
Ukraine	M Kulyzkyi, G Vladzjievskaya, and M Kolesnyk

The ERA-EDTA Registry is funded by the European Renal Association - European Dialysis and Transplant Association (ERA-EDTA).

List of abbreviations

Abbreviation	Term
APD	Automated peritoneal dialysis
CAKUT	Congenital anomalies of the kidney and urinary tract
CAPD	Continuous ambulatory peritoneal dialysis
CI	Confidence interval
COD	Cause of death
DM	Diabetes mellitus
ERA-EDTA	European Renal Association - European Dialysis and Transplant Association
ESPN	European Society for Paediatric Nephrology
ESRD	End-stage renal disease
EU27	The 27 Member States of the European Union as of 2007 (Austria, Belgium, Bulgaria, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, The Netherlands, United Kingdom)
GN	Glomerulonephritis / sclerosis
HD	Haemodialysis
HDF	Haemodiafiltration
HF	Haemofiltration
HT	Hypertension
HUS	Haemolytic uraemic syndrome
ISO	International Standards Organization
Misc	Miscellaneous
N	Count
ODBC	Open database connectivity
Oth	Other
PD	Peritoneal dialysis
PGP	Pretty good privacy
PKD	Polycystic kidneys, adult type
Pmarp	Per million age-related population
Pmp	Per million population
PN	Pyelonephritis
PRD	Primary renal disease
RRT	Renal replacement therapy
RVD	Renal vascular disease
SD	Standard deviation
SOPs	Standard Operating Procedures
Tx	Transplant
Unkn	Unknown
USRDS	United States Renal Data System

 A5 RENAL TRANSPLANTS IN 2009	
Table A.5.1	43
Renal transplants performed in 2009, numbers and percentages <i>by donor type</i>	
Table A.5.2	44
Renal transplants performed in 2009, per million population <i>by donor type</i>	
 A6 SURVIVAL PROBABILITY	
<u>Patient Survival on RRT</u>	
Table A.6.1	46
90-day, one-, two- and five-year survival probabilities (cohort 2000-2004): Incident RRT patients, unadjusted <i>from day 1 to 90 days, one, two, and five years, by age, gender, and primary diagnosis</i>	
Table A.6.2	47
90-day, one-, two- and five-year survival probabilities (cohort 2000-2004): Incident RRT patients, adjusted <i>from day 1 to 90 days, one, two, and five years, adjusted for age, gender, and primary diagnosis</i>	
Table A.6.3	48
One-, two- and five-year survival probabilities (cohort 2000-2004): Incident RRT patients, unadjusted <i>from day 91 to one, two, and five years + 90 days, by age, gender, and primary diagnosis</i>	
Table A.6.4	49
One-, two- and five-year survival probabilities (cohort 2000-2004): Incident RRT patients, adjusted <i>from day 91 to one, two, and five years + 90 days, adjusted for age, gender, and primary diagnosis</i>	
Table A.6.5	50
90-day, one- and two-year survival probabilities (cohort 2003-2007): Incident RRT patients, unadjusted <i>from day 1 to 90 days, one, and two years, by age, gender, and primary diagnosis</i>	
Table A.6.6	51
90-day, one- and two-year survival probabilities (cohort 2003-2007): Incident RRT patients, adjusted <i>from day 1 to 90 days, one, and two years, adjusted for age, gender, and primary diagnosis</i>	

Table A.6.7	52
One- and two-year survival probabilities (cohort 2003-2007): Incident RRT patients, unadjusted <i>from day 91 to one and two years + 90 days, by age, gender, and primary diagnosis</i>	
Table A.6.8	53
One- and two-year survival probabilities (cohort 2003-2007): Incident RRT patients, adjusted <i>from day 91 to one and two years + 90 days, adjusted for age, gender, and primary diagnosis</i>	
<u>Patient Survival on Dialysis</u>	
Table A.6.9	54
90-day, one-, two- and five-year survival probabilities (cohort 2000-2004): Incident dialysis patients, unadjusted <i>from day 1 to 90 days, one, two, and five years, by age, gender, and primary diagnosis</i>	
Table A.6.10	55
90-day, one-, two- and five-year survival probabilities (cohort 2000-2004): Incident dialysis patients, adjusted <i>from day 1 to 90 days, one, two, and five years, adjusted for age, gender, and primary diagnosis</i>	
Table A.6.11	56
One-, two- and five-year survival probabilities (cohort 2000-2004): Incident dialysis patients, unadjusted <i>from day 91 to one, two, and five years + 90 days, by age, gender, and primary diagnosis</i>	
Table A.6.12	57
One-, two- and five-year survival probabilities (cohort 2000-2004): Incident dialysis patients, adjusted <i>from day 91 to one, two, and five years + 90 days, adjusted for age, gender, and primary diagnosis</i>	
Table A.6.13	58
90-day, one- and two-year survival probabilities (cohort 2003-2007): Incident dialysis patients, unadjusted <i>from day 1 to 90 days, one, and two years, by age, gender, and primary diagnosis</i>	
Table A.6.14	59
90-day, one- and two-year survival probabilities (cohort 2003-2007): Incident dialysis patients, adjusted <i>from day 1 to 90 days, one, and two years, adjusted for age, gender, and primary diagnosis</i>	
Table A.6.15	60
One- and two-year survival probabilities (cohort 2003-2007): Incident dialysis patients, unadjusted <i>from day 91 to one and two years + 90 days, by age, gender, and primary diagnosis</i>	
Table A.6.16	61
One- and two-year survival probabilities (cohort 2003-2007): Incident dialysis patients, adjusted <i>from day 91 to one and two years + 90 days, adjusted for age, gender, and primary diagnosis</i>	
<u>Patient Survival after First Transplant (deceased donor)</u>	
Table A.6.17	62
One-, two- and five-year survival probabilities (cohort 2000-2004): First transplant patients (deceased donor), unadjusted <i>from day of transplant to one, two, and five years, by age, gender, and primary diagnosis</i>	
Table A.6.18	63
One-, two- and five-year survival probabilities (cohort 2000-2004): First transplant patients (deceased donor), adjusted <i>from day of transplant to one, two, and five years, adjusted for age, gender, and primary diagnosis</i>	
Table A.6.19	64
One- and two-year survival probabilities (cohort 2003-2007): First transplant patients (deceased donor), unadjusted <i>from day of transplant to one and two years, by age, gender, and primary diagnosis</i>	
Table A.6.20	65
One- and two-year survival probabilities (cohort 2003-2007): First transplant patients (deceased donor), adjusted <i>from day of transplant to one and two years, adjusted for age, gender, and primary diagnosis</i>	
<u>Patient Survival after First Transplant (living donor)</u>	
Table A.6.21	66
One-, two- and five-year survival probabilities (cohort 2000-2004): First transplant patients (living donor), unadjusted <i>from day of transplant to one, two, and five years, by age, gender, and primary diagnosis</i>	
Table A.6.22	67
One-, two- and five-year survival probabilities (cohort 2000-2004): First transplant patients (living donor), adjusted <i>from day of transplant to one, two, and five years, adjusted for age, gender, and primary diagnosis</i>	
Table A.6.23	68
One- and two-year survival probabilities (cohort 2003-2007): First transplant patients (living donor), unadjusted <i>from day of transplant to one and two years, by age, gender, and primary diagnosis</i>	
Table A.6.24	69
One- and two-year survival probabilities (cohort 2003-2007): First transplant patients (living donor), adjusted <i>from day of transplant to one and two years, adjusted for age, gender, and primary diagnosis</i>	

Graft Survival after First Transplant (deceased donor)	
Table A.6.25	70
One-, two- and five-year survival probabilities (cohort 2000-2004): First graft (deceased donor), unadjusted from day of transplant to one, two, and five years, by age, gender, and primary diagnosis	
Table A.6.26	71
One-, two- and five-year survival probabilities (cohort 2000-2004): First graft (deceased donor), adjusted from day of transplant to one, two, and five years, adjusted for age, gender, and primary diagnosis	
Table A.6.27	72
One- and two-year survival probabilities (cohort 2003-2007): First graft (deceased donor), unadjusted from day of transplant to one and two years, by age, gender, and primary diagnosis	
Table A.6.28	73
One- and two-year survival probabilities (cohort 2003-2007): First graft (deceased donor), adjusted from day of transplant to one and two years, adjusted for age, gender, and primary diagnosis	
Graft Survival after First Transplant (living donor)	
Table A.6.29	74
One-, two- and five-year survival probabilities (cohort 2000-2004): First graft (living donor), unadjusted from day of transplant to one, two, and five years, by age, gender, and primary diagnosis	
Table A.6.30	75
One-, two- and five-year survival probabilities (cohort 2000-2004): First graft (living donor), adjusted from day of transplant to one, two, and five years, adjusted for age, gender, and primary diagnosis	
Table A.6.31	76
One- and two-year survival probabilities (cohort 2003-2007): First graft (living donor), unadjusted from day of transplant to one and two years, by age, gender, and primary diagnosis

I Introduction

The ERA-EDTA Registry collects data on renal replacement therapy (RRT) via the national and regional renal registries in Europe. For this Annual Report 2009 it used 56 data sets from national or regional renal registries in 30 countries. The reference tables are presented in two parts: Section A (chapter II) and Section B (chapter III). Section A relates to individual patient data from 26 national and regional registries from 14 countries (shown in red in Figure 1), whereas section B relates to 19 national registries from 19 countries providing aggregated data based on individual patient data, centre questionnaire data or information from health authorities (shown in orange in Figure 1).

Chapter overview

Chapter II (Section A) contains data on the incidence and prevalence of RRT and data on survival and expected remaining lifetimes from those registries providing individual patient data. Chapter III (Section B) contains data on the incidence and prevalence from the countries providing aggregated data. Chapter IV describes summary data from all participating registries. The incidence and prevalence of RRT in paediatric patients are described in chapter V, based on data from registries providing individual paediatric data. Chapter VI describes the methods used, including data collection and preparation, definitions, and coding systems. In addition, it describes the statistical methods to calculate incidence and prevalence, patient and graft survival, and expected remaining lifetimes.

ERA-EDTA Registry website

PDF files of the ERA-EDTA annual reports and other information on the Registry can be downloaded from the website of the ERA-EDTA Registry: www.era-edta-reg.org. This website also includes a repository of educational publications and presentations concerning epidemiology and biostatistics.

ESPN/ERA-EDTA Registry website

Information on the activities of the European Society for Paediatric Nephrology (ESPN)/ERA-EDTA Registry and on paediatric registries in general is provided at the ESPN/ERA-EDTA Registry website: www.espn-reg.org. In addition, PDF files of the ESPN/ERA-EDTA Registry annual reports can be downloaded from this website.

When cells are left empty, (complete) data are unavailable

* Patients younger than 20 years of age are not reported

§ Data based on the regions Alsace, Auvergne, Bretagne, Champagne-Ardenne, Corse, Haute Normandie, Languedoc Roussillon, Limousin, Midi-Pyrénées, Pays de Loire, Picardie, Poitou-Charentes, Provence-Alpes-Côte d Azur, Rhône Alpes, and the overseas department of Reunion

† Data based on the regions Abruzzi, Apulia, Basilicata, Calabria, Emilia-Romagna, Friuli-Venezia Giulia, Lombardy, Marche, Sardinia, Tuscany, Umbria, and Veneto

The percentage of missing prevalent RRT patients is estimated at 11%, due to an estimated 25-30% underreporting of patients living on a functioning graft

|| Not all UK centres record whether a patient is on HDF and this is probably an underestimate of HDF usage in the UK

‡ Number of living transplants is underestimated

All countries	257087	34064	132	7313	28	239616	932	34914	136

§ Data based on the regions Alsace, Auvergne, Bourgogne, Bretagne, Champagne-Ardenne, Corse, Haute Normandie, Languedoc Roussillon, Limousin, Midi-Pyrénées, Pays de Loire, Picardie, Poitou-Charentes, Provence-Alpes-Côte d'Azur, Rhône Alpes, and the overseas department of Reunion

† Data based on the regions Abruzzi, Apulia, Basilicata, Calabria, Emilia-Romagna, Friuli-Venezia Giulia, Lombardy, Marche, Sardinia, Tuscany, Umbria, and Veneto

‡ The percentage of missing prevalent RRT patients is estimated at 11% due to an estimated 25-30% underreporting of patients living on a functioning graft

It should be mentioned that Belgium (Dutch-speaking), Belgium (French-speaking), Spain (Cantabria), Spain (Castile-La Mancha), Spain (Castile and Leon), and United Kingdom (England/Northern Ireland/Wales) did not provide data of patients in the age group from 0 to 20 years. Therefore, the true incidence and prevalence counts for these countries are slightly higher than the counts reported here.

// Data based on the regions Andalusia, Aragon, Asturias, Balearic Islands, Basque country, Canary Islands, Cantabria, Castile and Leon, Castile-La Mancha, Catalonia, Extremadura, Galicia, La Rioja, Navarre, Valencian region, and the overseas cities Ceuta and Melilla

Data do not include the Zaporizhyya region

V Reference Tables - Section Paediatric RRT

V Reference Tables - Section Paediatric RRT

The incidence and prevalence of RRT in paediatric patients are based on data from 19 registries from 12 countries that provided individual patient data on children via the ERA-EDTA Registry, including Austria, Denmark, Finland, France, Greece, Iceland, Norway, Romania, Spain (Andalusia), Spain (Asturias), Spain (Basque country), Spain (Canary Islands), Spain (Catalonia), Spain (Galicia), Spain (Extremadura), Spain (Valencian region), Sweden, The Netherlands, and United Kingdom (Scotland). In the analyses the data collected between 2000 and 2009 were used. As not all countries provided data over the complete period and to allow for comparison over the years, data regarding 2006 through 2009 are shown both including and excluding the data from France, Romania, Spain (Canary Islands), Spain (Extremadura), and Spain (Galicia). The methods that were applied to the data on paediatric patients were similar to those applied to the data on adult patients and are described in Chapter VI Methods. However, as not all regions did have specialized paediatric centres, also non-residents were included in the incidence and prevalence.

Further details on the epidemiology of paediatric patients on RRT and on projects and initiatives collecting paediatric data are available on the website of the European Society for Paediatric Nephrology (ESPN)/ ERA-EDTA Registry, www.espn-reg.org. In addition to the countries presented in this report several other countries have contributed data regarding paediatric patients in 2009 to the ESPN/ERA-EDTA Registry separately from the ERA-EDTA Registry.

VI Methods

VI Methods

The ERA-EDTA Registry is located at the Department of Medical Informatics of the Academic Medical Center in Amsterdam, The Netherlands. This department hosts several clinical registries which share a quality management system with Standard Operating Procedures (SOPs) for data collection, data storage, data analysis, and the production of the annual report. The quality management system has been certified according to the ISO 9001:2000 norm since 2004 and according to the ISO 9001:2008 norm since September 2010.

Data collection and preparation

Section A

Data collection

Once a year data sets containing individual patient data are sent to the office of the ERA-EDTA Registry in Amsterdam. Data delivery takes place in one of the Open Data Base Connectivity (ODBC) compatible file formats, like Microsoft Access, Microsoft Excel, or in other formats like text, SPSS or SAS. Collaborating registries send data by e-mail and most data sets are received in PGP encrypted format.

Variables

The ERA-EDTA Registry asks national and regional registries for the data in Table 1.

Table 1: Variables collected for Section A

Patient data	Transaction data
Patient identifier	Patient identifier
Country of registry	Date of event
Date of birth	Type of event / treatment
Gender	Cause of death
Primary Renal Disease	Treatment centre
Date of first RRT	Source registry
	Destination registry

Collaborating registries and participating countries

Individual patient data of 26 national and regional registries from 14 countries were used to create the tables in Section A of this annual report (see Figure 1).

Registry data are subject to continuous alteration and improvement. Small differences between ERA-EDTA Registry data and the data presented in the national and regional registry's own annual reports may result from different times of data extraction. Minor differences between the numbers reported by the UK Renal Registry and this annual report may occur because of two reasons. First, the UK Renal Registry allocates patients to UK country by zip code of residence, while the ERA-EDTA Registry allocates patients by renal unit. Second, the prevalence as reported in the UK Renal Registry Report is based on quarterly data returns, whereas the prevalence as reported in this annual report is based on data derived from the modality timeline.

The data on France presented in Section A of this report, are based on one dataset containing data from 16 of 26 regions, including Alsace, Auvergne, Bourgogne, Bretagne, Champagne-Ardenne, Corse, Haute-Normandie, Languedoc-Roussillon, Limousin, Midi-Pyrénées, Pays de la Loire, Picardie, Poitou-Charentes, Provence-Alpes-Côte d'Azur, Rhône-Alpes, and the overseas department of Reunion.

The data on Italy presented in Section A of this report, are based on separate datasets from 12 of 20 regions, including Abruzzi, Apulia, Basilicata, Calabria, Emilia-Romagna, Friuli-Venezia Giulia, Lombardy, Marche, Sardinia, Tuscany, Umbria, and Veneto.

The data on Spain presented in Section A of this report are based on separate datasets from 11 of 19 regions, including Andalusia, Asturias, Basque country, Canary Islands, Cantabria, Castile and Leon, Castile-La Mancha, Catalonia, Extremadura, Galicia, and Valencian region.

Differences between collaborating registries

Definitions and collection of data

In the comparison of data between registries it should be recognized that there may be small differences between registries in definitions and in the collection of their data. For example, the different registries do not collect data at the same level of detail, especially with regard to the various subtypes of the treatment modalities.

Patient population

The data from Belgium (Dutch-speaking), Belgium (French-speaking), Spain (Cantabria), Spain (Castile-La Mancha), Spain (Castile and Leon), and United Kingdom (England/Northern Ireland/Wales) only comprised patients older than 20 years of age. It has been estimated that inclusion of data on children would add about 2 per million population (Pmp) to the incidence rate and about 13 Pmp to the prevalence.

For the calculation of the incidence of those alive and on RRT on day 91, registries were asked to provide data with a follow-up until 31 March 2010. For the following registries data were only available until 31 December 2009: Belgium (Dutch-speaking), Denmark, Finland, France (all regions), Italy (all regions), Spain (Asturias), Spain (Catalonia), Spain (Extremadura), Spain (Galicia) and UK (England/Northern Ireland/Wales). For these registries the incidence on day 91 was estimated as explained in the paragraph on statistical analyses.

In Italy there is an underreporting of patients living on a functioning graft that is estimated at 25-30%. As a consequence, the overall prevalence of RRT was underestimated by approximately 11%. As the therapy history of transplant recipients could not be completely reconstructed the Italian data were excluded from all analyses for which this therapy history is needed, e.g. survival analysis. An exception was made for data from Calabria that were complete and could therefore participate in all analyses performed by the ERA-EDTA Registry.

Data loading and cleaning

The registry data were imported using an in-house developed import utility. This program first unifies the data and then translates any non-standard codes. Consistency checks were performed, and thereafter the data were converted to the desired format in order to make storage in the relational and event-driven database possible. The new data, annually provided by national and regional registries, replaced all existing data in the ERA-EDTA Registry database. Changes in the data sets made by the national and regional registries were in this way adopted by the ERA-EDTA Registry. The import utility performed extensive logging and the logging-results were used to provide the national and regional registries with feedback concerning inconsistencies or other problems in the data.

After data analysis, the results were compared to the annual reports published by the national and regional registries as a first check for errors. In case of discrepancies the registry was contacted and potential problems regarding (the interpretation of) their data set were solved. Thereafter, more detailed reports were produced which needed the approval from the registries before publication in the ERA-EDTA annual report.

ERA-EDTA Registry database

Microsoft SQL Server (a database management system) was used to manage the ERA-EDTA Registry database. This relational and event-driven database consists of a patient and a transaction table which can be extended according to future needs.

General population data

Midyear population data of the contributing countries were provided by Eurostat, the national bureau of statistics or the national or regional registry. The sources of the population data used for the analyses in Section A are shown in Table 2.

Table 2: Sources of general population data for the national and regional registries participating in Section A

Reference population

Since the annual report 2008, the age and gender distribution of the EU27 of 2005 as provided by Eurostat is used for the adjustment of incidence rates and prevalence for age and gender [1]. The age and gender distribution of EU27 in 2005 is shown in Table 3.

Table 3: The age and gender distribution of the reference population EU27 (2005)

Age groups	All	Men	Women
	N	N	N
0-4	25.319.377	12.987.194	12.332.183
5-9	25.785.403	13.220.589	12.564.814
10-14	27.909.860	14.308.595	13.601.265
15-19	30.553.193	15.655.201	14.897.992
20-24	32.182.224	16.362.495	15.819.729
25-29	33.801.832	17.155.652	16.646.180
30-34	35.618.802	18.014.943	17.603.859

Section B

Data collection

Section B relates to national registries from countries providing the ERA-EDTA Registry with aggregated data. Data were provided via a Microsoft Excel template and imported for inclusion in this annual report.

Collaborating registries

Aggregated data from 19 national registries from 19 countries are used for the preparation of the tables in Section B (see Figure 1). The following countries participated in Section B of this year's annual report: Bosnia and Herzegovina, Bulgaria, Croatia, Czech Republic, Estonia, France, FYR of Macedonia, Israel, Italy, Latvia, Montenegro, Poland, Portugal, Russia, Serbia, Slovakia, Spain, Turkey, and Ukraine.

Data from France are based on 20 of 26 regions, including Alsace, Auvergne, Bourgogne, Bretagne, Centre, Champagne-Ardenne, Corse, Haute-Normandie, Ile de France, Languedoc-Roussillon, Limousin, Lorraine, Midi-Pyrénées, Nord-Pas de Calais, Pays de la Loire, Picardie, Poitou-Charentes, Provence-Alpes-Côte d'Azur, Rhône-Alpes, and the overseas department of Reunion.

Data from Italy are based on 14 of 20 regions, including Abruzzi, Apulia, Basilicata, Calabria, Emilia-Romagna, Friuli-Venezia Giulia, Lombardy (part), Marche, Sardinia (part), Sicily, Trentino-Alto Adige, Tuscany (part), Umbria, and Veneto.

Data from Spain are based on 17 of 19 regions, including Andalusia, Aragon, Asturias, Balearic Islands, Basque country, Canary Islands, Cantabria, Castile and Leon, Castile-La Mancha, Catalonia, Extremadura, Galicia, La Rioja, Navarre, Valencian region, and the overseas cities Ceuta and Melilla.

Differences between collaborating registries

For the French data it was assumed that patients with a functioning graft with unknown residence (13%) lived in the same region as the region where they were followed.

Data loading and cleaning

The Microsoft Excel templates used for data collection included automated consistency checks. Additional checks were performed manually.

General population data

The population data needed for the calculation of incidence rates and prevalence Pmp were reported by the collaborating registries.

Reference population

As in Section A, we used the age and gender distribution of the EU27 of 2005 (see Table 3) as provided by Eurostat for the adjustment of incidence rates and prevalence [1].

Definitions and coding systems

The definitions given below apply to both Section A and B.

Incidence and prevalence

Incidence is the number of new cases of a condition during a specific period of time which, in this annual report, is a year (2009). Prevalence is the number of people in a given population with a particular disease at a given time, in this annual report at December 31, 2009.

Primary cause of renal failure

Renal diseases were defined according to the ERA-EDTA coding systems and subsequently classified into groups (Appendix 1).

Causes of death

Causes of death were defined according to the ERA-EDTA coding systems and subsequently classified into groups (Appendix 2).

Treatment modalities

Appendix 3 provides an overview of the coding currently used for treatment modalities in the ERA-EDTA database.

Statistical analyses

An overview of the renal registries contributing data for the different types of analyses is given in Appendix 4.

SAS 9.2

For the data analyses SAS 9.2 [2] was used. This statistical software package is able to maintain large datasets, is syntax driven which increases reproducibility of results, and has extensive capabilities with respect to statistics and data management.

Section A

Incidence and prevalence

The incidence and prevalence tables were based on 37 data sets from national or regional registries from 14 countries that provided individual patient data for 2009, including Austria, Belgium (Dutch-speaking), Belgium (French-speaking), Denmark, Finland, France (16 regions), Greece, Iceland, Italy (Abruzzi), Italy (Apulia), Italy (Basilicata), Italy (Calabria), Italy (Emilia-Romagna), Italy (Friuli-Venezia Giulia), Italy (Lombardy), Italy (Marche), Italy (Sardinia), Italy (Tuscany), Italy (Umbria), Italy (Veneto), Norway, Romania, Spain (Andalusia), Spain (Asturias), Spain (Basque country), Spain (Canary Islands), Spain (Cantabria), Spain (Castile and Leon), Spain (Castile-La Mancha), Spain (Catalonia), Spain (Extremadura), Spain (Galicia), Spain (Valencian region), Sweden, The Netherlands, United Kingdom (England/Northern Ireland/Wales) and United Kingdom (Scotland).

Methods for calculating incidence and prevalence

Incidence (on day 1 and day 91) and prevalence of those alive and on RRT were calculated for the total population and for subgroups based on gender, age group, treatment modality, and cause of renal failure. The incidence or prevalence Pmp is the observed incident or prevalent count divided by the general population in that year and multiplied by one million. For the incidence or prevalence per million age-related population (Pmarp) the observed incident or prevalent count per age category was divided by the general population in that age category and multiplied by one million. The general (midyear) population data for the year 2009 were provided by Eurostat, the national bureau of statistics or the national or regional registry (see data collection and preparation).

For those registries that had no data available with a follow-up until March 31, 2010, the incidence of RRT on day 91 was estimated. We assumed that the relative difference between the incidence on day 1 and the incidence on day 91 was similar for patients who started RRT in the first nine months of 2009, when compared to patients who started RRT in the last three months of 2009.

For the calculation of the mean and median age for incident patients on day 91, we used the actual age on day 91.

Adjustment of incidence and prevalence

Differences in unadjusted incidence and prevalence might be due to the differences in the age and gender distribution of the general population. The EU27 age and gender distribution of the European population was therefore used to adjust incidence and prevalence for age and gender [1]. Adjusted rates were derived by applying the weights of a reference population to the observed variable-specific rates (e.g. incidence rate per age group) in a country. This weighed average provides for each country a single summary rate that would be expected if that country had the age and gender distribution of the reference population.

The following example shows how to calculate the age adjusted incidence. In this example the incidence rate of country A in 2009 is 269 Pmp, the age-specific rates of country A and the reference population distribution with respect to age are shown in Table 4.

Table 4: Calculation of the adjusted incidence rate

Age groups	Incidence rate country A	Reference population
	Pmp	%
0-19	332	31.7
20-44	261	39.3
45-64	64	29.0
Total	269	100

The adjusted incident rate of country A in 2009 is:

$$(0.317 * 332) + (0.393 * 261) + (0.29 * 64) = 226 \text{ Pmp}$$

Performed renal transplants

For all participating countries and regions the number of renal transplants performed during the year was presented by donor type. In Iceland the number of transplants was somewhat lower, because several patients received transplants in other countries. Rates are expressed as numbers, percentages and Pmp.

Survival probability

In this annual report, patient survival on RRT, patient survival on dialysis, patient survival after the first transplant, and graft survival after the first transplant are presented in tables by age, gender and cause of renal failure. In the figures, the patient survival is presented by treatment modality and by cause of renal failure. Survival probabilities are presented as percentages from 0 to 100.

Survival was analysed from day 1 and from day 91 onwards for those patients alive and on RRT on those days [4]. For the analysis of survival data two five-year cohorts were used:

- 2000-2004 - for the presentation of 90-day, one-, two- and five-year survival probabilities.
- 2003-2007 - for the presentation of 90-day, one- and two-year survival probabilities.

These analyses were based on data from Austria, Belgium (Dutch-speaking), Belgium (French-speaking), Denmark, Finland, Greece, Iceland, Italy (Calabria), Norway, Spain (Andalusia), Spain (Asturias), Spain (Basque country), Spain (Cantabria), Spain (Catalonia), Spain (Valencian region), Sweden, The Netherlands, United Kingdom (England/Wales) and United Kingdom (Scotland). Spain (Castile and Leon), Spain (Castile-La Mancha) and Spain (Extremadura) were only included in the analyses based on the second cohort (2003-2007), because for these registries complete data were available from 2002.

December 31, 2009 was applied as censoring date for all survival analyses. For the different types of survival analysis the events and censoring were defined as shown in Table 5.

Table 5: Overview of the events and censoring as defined for the survival analyses in Section A

Survival type	Event	Censoring
Patients on renal replacement therapy	Death of patient	Recovery of renal function * Loss to follow-up End of follow-up time
Patients on dialysis	Death of patient	Transplantation Recovery of renal function * Loss to follow-up End of follow-up time
First transplant recipients	Death of patient	Loss to follow-up End of follow-up time
First graft	Death of patient Graft failure	Loss to follow-up End of follow-up time

* Only when a patients' renal function recovered for more than 30 days this was considered as a censored observation.

Unadjusted survival probabilities

Unadjusted survival probabilities were calculated using the Kaplan-Meier method, and corresponding confidence intervals were calculated according to Bie et al. [4]. In unadjusted survival analysis the cells in the tables were left blank when there were less than 30 patients in that cell.

Adjusted survival probabilities

The Cox regression model was used to compare the survival between groups while accounting for confounders [5]. Survival probabilities were adjusted for age, gender and primary renal disease. As the ERA-EDTA Registry database is still growing with respect to the coverage of European countries, it was decided to adjust for fixed values for a number of variables in the survival analyses to make results more comparable across time periods. The fixed values of variables used for the survival tables are shown in Table 6.

In the adjusted survival analyses, cells with less than 30 events were left empty. Patients for whom age, gender, or primary renal disease was missing were excluded.

Survival figures

In the Figures A.6.1 to A.6.3 survival was adjusted for age 60 years and gender 60% men. In addition, Figure A.6.1 was adjusted for primary renal disease distribution: 20% Diabetes; 17% Hypertension / renal vascular disease; 15% Glomerulonephritis and 48% Other cause.

Table 6: Overview of the variables used to adjust the survival probabilities in Section A

Survival type	Age	Gender	Renal disease
Patients on renal replacement therapy	60 years	60% men	20% Diabetes 17% Hypertension / renal vascular disease 15% Glomerulonephritis 48% Other cause
Patients on dialysis	60 years	60% men	20% Diabetes 17% Hypertension / renal vascular disease 15% Glomerulonephritis 48% Other cause
First transplant recipients (deceased donor)	45 years	60% men	10% Diabetes 8% Hypertension / renal vascular disease 28% Glomerulonephritis 54% Other cause
First transplant recipients (living donor)	45 years	60% men	10% Diabetes 8% Hypertension / renal vascular disease 28% Glomerulonephritis 54% Other cause
First graft (deceased donor)	45 years	60% men	10% Diabetes 8% Hypertension / renal vascular disease 28% Glomerulonephritis 54% Other cause
First graft (living donor)	45 years	60% men	10% Diabetes 8% Hypertension / renal vascular disease 28% Glomerulonephritis 54% Other cause

The differences between the survival probabilities of this annual report and survival probabilities published in earlier annual reports of the ERA-EDTA Registry may be partly due to differences in participating countries.

Expected remaining lifetimes

Expected remaining lifetimes represent the average number of years of life remaining for persons who have reached a given age. In this annual report, expected remaining lifetimes were calculated for RRT patients and for the general population. For the calculation of expected remaining lifetimes of both groups, the methodology of the United States Renal Data System (USRDS) was adopted [6].

To be able to calculate expected remaining lifetimes we used data from registries providing data from 1998 until 2009. Consequently, the data of the following national or regional registries from 12 countries were suitable for this analysis: Austria, Belgium (Dutch-speaking), Belgium (French-speaking), Denmark, Finland, Greece, Iceland, Italy (Calabria), Norway, Spain (Andalusia), Spain (Asturias), Spain (Basque country), Spain (Cantabria), Spain (Catalonia), Spain (Valencian region), Sweden, The Netherlands, United Kingdom (England/Wales) and United Kingdom (Scotland). With regard to the inclusion of the data, it should be noted that the differences between the expected remaining lifetimes of this annual report and expected remaining lifetimes published in earlier annual reports of the ERA-EDTA Registry may be partly due to differences in participating countries.

RRT population

The expected remaining lifetimes for RRT patients are presented by age, gender and treatment modality. The expected remaining lifetime for a certain patient group is the average of the remaining life expectancies for the patients in that group. Although this can not be known until all the patients in the group have died, the expected remaining lifetime can be projected by assuming that patients in the patient group will die at the same rates as those observed among older groups of recent prevalent RRT patients.

General population

The death rates Pmp by gender and age of the general population of the contributing countries were provided by Eurostat (based on EU27 in 2005). The size of the contribution of each country to the general population that was used to calculate expected remaining lifetimes was in proportion to the size of the general population covered by its renal registry.

Section B

Incidence and prevalence counts were provided by the contributing registries themselves. To increase the consistency of the data, general explanations of how to complete the Microsoft Excel template and how to calculate adjusted incidence and prevalence counts were provided to support the participating registries.

Paediatric Section

The incidence and prevalence tables were based on 19 national or regional registries from 12 countries that provided complete individual patient data in their paediatric population for 2000 to 2009, including Austria, Denmark, Finland, France, Greece, Iceland, Norway, Romania, Spain (Andalusia), Spain (Asturias), Spain (Basque country), Spain (Canary Islands), Spain (Catalonia), Spain (Extremadura), Spain (Galicia), Spain (Valencian region), Sweden, The Netherlands, and United Kingdom (Scotland). France provided data since 2008, Spain (Canary Islands) since 2004, Spain (Extremadura) since 2002, Spain (Galicia) since 2007 and Romania provided data since 2006. Furthermore, as not every region in Spain had a specialised paediatric centre, paediatric patients could be treated in other regions than their resident region. This would result in an underestimation of the incidence and prevalence in these regions. To adjust for this, non-resident paediatric patients were not excluded in the paediatric section. Incidence (on day 1) and prevalence on RRT were calculated for subgroups based on age, treatment modality, and cause of renal failure. Incidence on RRT by 2-year cohorts was presented for paediatric patients who started RRT between 2000 and 2009. The cohorts 2006-2007 and 2008-2009 were presented twice, once including and once excluding the countries with a limited follow-up to allow for a comparison over time. The incidence on RRT Pmarp was the observed incident count in that particular time period divided by the age-related general population in that time period (for example the total population in 2008 + the total population in 2009) multiplied by one million. The grouping of primary renal disease codes for the paediatric population is described in Table P.1.2 as it differs from the grouping in the adult population.

The prevalence on RRT was presented at December 31 of each year from 2000 to 2009. Again, the years 2006, 2007, 2008 and 2009 were presented twice to allow for a comparison over time. The prevalence on RRT by cause of renal failure was calculated for patients prevalent on December 31, 2009.

VII Appendices

Appendix 1 - Grouping of primary renal diseases

Primary renal disease	1994 code	1995 code	PRD group
Glomerulonephritis; histologically NOT examined	10	10	I
Focal segmental glomerulosclerosis with nephrotic syndrome in children	11	11	I
IgA nephropathy (proven by immunofluorescence, not code 76 or 85)	12	12	I
Dense deposit disease; membrano-proliferative GN; type II (proven by immunofluorescence / electron microscopy)	13	13	I
Membranous nephropathy	14	14	I
Membrano-proliferative GN; type I (proven by immunofluorescence / electron microscopy, not code 84 or 89)	15	15	I
Crescentic (extracapillary) glomerulonephritis (type I, II, III)	16	16	I
Focal segmental glomerulosclerosis with nephrotic syndrome in adults	17	17	I
Glomerulonephritis; histologically examined, not given above	19	19	I
Pyelonephritis; cause not specified	20	20	II
Pyelonephritis associated with neurogenic bladder	21	21	II
Pyelonephritis due to congenital obstructive uropathy with/without vesico-ureteric reflux	22	22	II
Pyelonephritis due to acquired obstructive uropathy	23	23	II
Pyelonephritis due to vesico-ureteric reflux without obstruction	24	24	II
Pyelonephritis due to urolithiasis	25	25	II
Pyelonephritis due to other cause	29	29	II
Interstitial nephritis (not pyelonephritis) due to other cause, or unspecified (not mentioned above)	30	30	VII
Nephropathy (interstitial) due to analgesic drugs	31	31	VII
Nephropathy (interstitial) due to cis-platinum	32	32	VII
Nephropathy (interstitial) due to cyclosporin A	33	33	VII
Lead induced nephropathy (interstitial)		34	VII
Drug induced nephropathy (interstitial) not mentioned above	39	39	VII
Cystic kidney disease - type unspecified	40	40	VII
Polycystic kidneys; adult type (dominant)	41	41	III
Polycystic kidneys; infantile (recessive)	42	42	VII
Medullary cystic disease; including nephronophthisis	43	43	VII
Cystic kidney disease - other specified type	49	49	VII
Hereditary / Familial nephropathy - type unspecified	50	50	VII
Hereditary nephritis with nerve deafness (Alport's Syndrome)	51	51	VII
Cystinosis	52	52	VII
Primary oxalosis	53	53	VII
Fabry's disease	54	54	VII
Hereditary nephropathy - other specified type	59	59	VII
Renal hypoplasia (congenital) - type unspecified	60	60	VII
Oligomeganephronic hypoplasia	61	61	VII
Congenital renal dysplasia with or without urinary tract malformation	63	63	VII
Syndrome of agenesis of abdominal muscles (Prune Belly)	66	66	VII
Renal vascular disease - type unspecified	70	70	V
Renal vascular disease due to malignant hypertension	71	71	IV
Renal vascular disease due to hypertension	72	72	IV
Renal vascular disease due to polyarteritis	73	73	VII
Wegener's granulomatosis	74	74	VII
Ischaemic renal disease/cholesterol embolism (1998 prd code)		75	VII
Glomerulonephritis related to liver cirrhosis	76	76	VII
Cryoglobulinaemic glomerulonephritis		78	VII
Renal vascular disease - due to other cause (not given above and not code 84-88)	79	79	V
Diabetes glomerulosclerosis or diabetic nephropathy - Type I	80	80	VI
Diabetes glomerulosclerosis or diabetic nephropathy - Type II	81	80	VI
Myelomatosis / light chain deposit disease	82	82	VII
Amyloid	83	83	VII
Lupus erythematosus	84	84	VII
Henoch-Schoenlein purpura	85	85	VII
Goodpasture's Syndrome	86	86	VII
Systemic sclerosis (scleroderma)	87	87	VII
Haemolytic Uraemic Syndrome (including Moschcowitz Syndrome)	88	88	VII
Multi-system disease - other (not mentioned above)	89	89	VII
Tubular necrosis (irreversible) or cortical necrosis (different from 88)	90	90	VII
Tuberculosis	91	91	VII
Gout	92	92	VII
Nephrocalcinosis and hypercalcaemic nephropathy	93	93	VII
Balkan nephropathy	94	94	VII
Kidney tumour	95	95	VII
Traumatic or surgical loss of kidney	96	96	VII
Other identified renal disorders	99	99	VII
Chronic renal failure; aetiology uncertain	00	00	VIII

PRD group: I: glomerulonephritis / sclerosis; II: pyelonephritis; III: polycystic kidneys, adult type; IV: hypertension; V: renal vascular disease; VI: diabetes; VII: miscellaneous; VIII: unknown

Appendix 2 - Grouping of causes of death

Cause of death	1994 code	1995 code	COD group
Cause of death uncertain / not determined	0	0	XI
Myocardial ischaemia and infarction	11	11	I
Hyperkalaemia	12	12	X
Haemorrhagic pericarditis	13	13	X
Other causes of cardiac failure	14	14	II
Cardiac arrest / sudden death; other cause or unknown	15	15	III
Hypertensive cardiac failure	16	16	II
Hypokalaemia	17	17	X
Fluid overload / pulmonary oedema	18	18	II
Pulmonary embolus	21	21	X
Cerebro-vascular accident, other cause or unspecified	22	22	IV
Gastro-intestinal haemorrhage	23	23	X
Haemorrhage from graft site	24	24	X
Haemorrhage from vascular access or dialysis circuit	25	25	X
Haemorrhage from ruptured vascular aneurysm (not code 22 or 23)	26	26	X
Haemorrhage from surgery (not code 23, 24 or 26)	27	27	X
Other haemorrhage (not codes 23-27)	28	28	X
Mesenteric infarction	29	29	X
Pulmonary infection (bacterial - not code 73)	31	31	V
Pulmonary infection (viral)	32	32	V
Pulmonary infection (fungal or protozoal; parasitic)	33	33	V
Infections elsewhere except virus hepatitis	34		V
Septicaemia	35	35	V
Tuberculosis (lung)	36	36	V
Tuberculosis (elsewhere)	37	37	V
Generalized viral infection	38	38	V
Peritonitis (all causes except for Peritoneal Dialysis)	39	39	V
Liver disease due to hepatitis B virus	41	41	X
Liver disease due to other viral hepatitis	42	42	X
Liver disease due to drug toxicity	43	43	X
Cirrhosis - not viral	44	44	X
Cystic liver disease	45	45	X
Liver failure - cause unknown	46	46	X
Patient refused further treatment for ESRF	51	51	VI
Suicide	52	52	VI
ESRF treatment ceased for any other reason	53	53	VII
ESRF treatment withdrawn for medical reasons		54	VII
Uremia caused by graft failure	61		X
Pancreatitis	62	62	X
Bone marrow depression	63	63	X
Cachexia	64	64	VIII
Malignant disease, possibly induced by immunosuppressive therapy	66	66	IX
Malignant disease: solid tumors except those of 66	67	67	IX
Malignant disease: lymphoproliferative disorders except those of 66		68	IX
Dementia	69	69	X
Peritonitis (sclerosing, with peritoneal dialysis)	70	70	V
Perforation of peptic ulcer	71	71	X
Perforation of colon	72	72	X
Chronic obstructive airways disease	73	73	X
Accident related to ESRF treatment (not code 25)	81	81	X
Accident unrelated to ESRF treatment	82	82	X
Peritonitis (bacterial, with peritoneal dialysis)		100	V
Peritonitis (fungal, with peritoneal dialysis)		101	V
Peritonitis (due to other cause, with peritoneal dialysis)		102	V
Other identified cause of death	99	99	X

COD group: I: myocardial ischaemia and infarction; II: heart failure; III: cardiac arrest, other cause / unknown; IV: cerebrovascular accident; V: infection; VI: suicide / refusal treatment; VII: withdrawal; VIII: cachexia; IX: malignancies; X: miscellaneous; XI: unknown / unavailable

Appendix 3 - Treatment modalities

Event	Event code
Home haemodialysis	001
Centre haemodialysis	002
Haemofiltration	003
Haemodiafiltration	004
Haemodialysis, type unknown	009
Continuous Ambulatory Peritoneal Dialysis (CAPD)	011
Intermittent Ambulatory Peritoneal Dialysis (CAPD)	012
Continuous Automated Peritoneal Dialysis (APD)	013
Intermittent Automated Peritoneal Dialysis (APD)	014
Peritoneal Dialysis, type unknown	019
Unknown dialysis	090
Transplantation, living donor	020
Transplantation, living related donor	021
Transplantation, living unrelated donor	022
Transplantation, deceased donor	023
Transplantation, donor type unknown	029
Transplantation follow-up (still functioning)	060
Graft failure	061
Treatment type unknown / unavailable	031
Recovery Renal Function	051
Death	052
Transfer out to other registry	053
Transfer in from other registry	054
Lost to follow-up	055
Limited care / stopped treatment (without recovery of renal function)	071

Appendix 4 - Renal registries contributing data for the different types of analyses
