ERA-EDTA Registry Committee

J Cannata-Andia, Spain (ERA-EDTA President)

C Zoccali, Italy (Chairman)
C Wanner, Germany (Newsletter Editor)
G Colasanti, Italy
F García López, Spain
AJ van der Heijden, The Netherlands
R Kramar, Austria
T Leivestad, Norway
A MacLeod, Scotland
B Stengel, France
J Tizard, United Kingdom

Registry Office Staff

AM van den Broek, data manager - software engineer
R Cornet, senior medical informatician
FW Dekker, senior epidemiologist
PCW van Dijk, medical informatician
EF Guggenheim-van der Hout, secretary
KJ Jager, managing director - epidemiologist
A Kramer, medical informatician
VS Stel, epidemiologist

Acknowledgements

The ERA-EDTA Registry would like to thank the patients and staff of all the dialysis and transplant units who have contributed data via their national and regional renal registries. In addition, we would like to thank the following persons and organizations for their contribution to the work of the ERA-EDTA Registry.

For contribution to Section A

Registry	Contributors
Austria	R Kramar
Belgium, Dutch-speaking	H Augustijn, JM Billiouw and J De Meester
Belgium, French-speaking	JM des Grottes and F Collart
Denmark	H Løkkegaard

A5 SURVIVAL PROBABILITY	
Patient Survival on Renal Replacement Therapy (RRT)	
Table A.5.1	46
90-day, one-, two- and five-year survival probabilities (cohort 1995-1999): Incident RRT patients, unadjusted from day 1 to 90 days, one, two and five years, by age, gender and primary diagnosis	
Table A.5.2	47
90-day, one-, two- and five-year survival probabilities (cohort 1995-1999): Incident RRT patients, adjusted from day 1 to 90 days, one, two and five years, adjusted for age, gender and primary diagnosis	
Table A.5.3	48
One-, two- and five-year survival probabilities (cohort 1995-1999): Incident RRT patients, unadjusted from day 91 to one, two and five years + 90 days, by age, gender and primary diagnosis	
Table A.5.4	49
One-, two- and five-year survival probabilities (cohort 1995-1999): Incident RRT patients, adjusted from day 91 to one, two and five years + 90 days, adjusted for age, gender and primary diagnosis	
Table A.5.5	50
90-day, one- and two-year survival probabilities (cohort 1998-2002): Incident RRT patients, unadjusted from day 1 to 90 days, one and two years, by age, gender and primary diagnosis	
Table A.5.6	51
90-day, one- and two-year survival probabilities (cohort 1998-2002): Incident RRT patients, adjusted from day 1 to 90 days, one and two years, adjusted for age, gender and primary diagnosis	
Table A.5.7	52
One- and two-year survival probabilities (cohort 1998-2002): Incident RRT patients, unadjusted from day 91 to one and two years + 90 days, by age, gender and primary diagnosis	

Table A.5.8	53
One- and two-year survival probabilities (cohort 1998-2002): Incident RRT patients, adjusted from day 91 to one and two years + 90 days, <i>adjusted for age, gender and primary diagnosis</i>	
Patient Survival on Dialysis	
Table A.5.9	54
90-day, one-, two- and five-year survival probabilities (cohort 1995-1999): Incident dialysis patients, unadjusted from day 1 to 90 days, <i>one, two and five years, by age, gender and primary diagnosis</i>	
Table A.5.10	55
90-day, one-, two- and five-year survival probabilities (cohort 1995-1999): Incident dialysis patients, <i>adjusted from day 1 to 90 days, one, two and five years, adjusted for age, gender and primary diagnosis</i>	
Table A.5.11	56
One-, two- and five-year survival probabilities (cohort 1995-1999): Incident dialysis patients, unadjusted from day 91 to one, two and five years + 90 days, <i>by age, gender and primary diagnosis</i>	
Table A.5.12	57
One-, two- and five-year survival probabilities (cohort 1995-1999): Incident dialysis patients, <i>adjusted from day 91 to one, two and five years + 90 days, adjusted for age, gender and primary diagnosis</i>	
Table A.5.13	58
90-day, one- and two-year survival probabilities (cohort 1998-2002): Incident dialysis patients, unadjusted from day 1 to 90 days, <i>one and two years, by age, gender and primary diagnosis</i>	
Table A.5.14	59
90-day, one- and two-year survival probabilities (cohort 1998-2002): Incident dialysis patients, <i>adjusted from day 1 to 90 days, one and two years, adjusted for age, gender and primary diagnosis</i>	
Table A.5.15	60
One- and two-year survival probabilities (cohort 1998-2002): Incident dialysis patients, unadjusted from day 91 to one and two years + 90 days, <i>by age, gender and primary diagnosis</i>	
Table A.5.16	61
One- and two-year survival probabilities (cohort 1998-2002): Incident dialysis patients, <i>adjusted from day 91 to one and two years + 90 days, adjusted for age, gender and primary diagnosis</i>	
Patient Survival after First Transplant (cadaver donor)	
Table A.5.17	62
One-, two- and five-year survival probabilities (cohort 1995-1999): First transplant patients (cadaver donor), unadjusted from day of transplant to one, two and five years, <i>by age, gender and primary diagnosis</i>	
Table A.5.18	63
One-, two- and five-year survival probabilities (cohort 1995-1999): First transplant patients (cadaver donor), <i>adjusted from day of transplant to one, two and five years, adjusted for age, gender and primary diagnosis</i>	
Table A.5.19	64
One- and two-year survival probabilities (cohort 1998-2002): First transplant patients (cadaver donor), unadjusted from day of transplant to one and two years, <i>by age, gender and primary diagnosis</i>	
Table A.5.20	65
One- and two-year survival probabilities (cohort 1998-2002): First transplant patients (cadaver donor), <i>adjusted from day of transplant to one and two years, adjusted for age, gender and primary diagnosis</i>	
Patient Survival after First Transplant (living donor)	
Table A.5.21	66
One-, two- and five-year survival probabilities (cohort 1995-1999): First transplant patients (living donor), unadjusted from day of transplant to one, two and five years, <i>by age, gender and primary diagnosis</i>	
Table A.5.22	67
One-, two- and five-year survival probabilities (cohort 1995-1999): First transplant patients (living donor), <i>adjusted from day of transplant to one, two and five years, adjusted for age, gender and primary diagnosis</i>	
Table A.5.23	68
One- and two-year survival probabilities (cohort 1998-2002): First transplant patients (living donor), unadjusted from day of transplant to one and two years, <i>by age, gender and primary diagnosis</i>	
Table A.5.24	69
One- and two-year survival probabilities (cohort 1998-2002): First transplant patients (living donor), <i>adjusted from day of transplant to one and two years, adjusted for age, gender and primary diagnosis</i>	
Graft Survival after First Transplant (cadaver donor)	
Table A.5.25	70
One-, two- and five-year survival probabilities (cohort 1995-1999): First graft (cadaver donor), unadjusted from day of transplant to one, two and five years, <i>by age, gender and primary diagnosis</i>	
Table A.5.26	71
One-, two- and five-year survival probabilities (cohort 1995-1999): First graft (cadaver donor), <i>adjusted from day of transplant to one, two and five years, adjusted for age, gender and primary diagnosis</i>	
Table A.5.27	72
One- and two-year survival probabilities (cohort 1998-2002): First graft (cadaver donor), unadjusted from day of transplant to one and two years, <i>by age, gender and primary diagnosis</i>	

Table A.5.28	73
One- and two-year survival probabilities (cohort 1998-2002): First graft (cadaver donor), adjusted from day of transplant to one and two years, adjusted for age, gender and primary diagnosis	
Graft Survival after First Transplant (living donor)	
Table A.5.29	74
One-, two- and five-year survival probabilities (cohort 1995-1999): First graft (living donor), unadjusted from day of transplant to one, two and five years, by age, gender and primary diagnosis	
Table A.5.30	75
One-, two- and five-year survival probabilities (cohort 1995-1999): First graft (living donor), adjusted from day of transplant to one, two and five years, adjusted for age, gender and primary diagnosis	
Table A.5.31	76
One- and two-year survival probabilities (cohort 1998-2002): First graft (living donor), unadjusted from day of transplant to one and two years, by age, gender and primary diagnosis	
Table A.5.32	77
One- and two-year survival probabilities (cohort 1998-2002): First graft (living donor), adjusted from day of transplant to one and two years, adjusted for age, gender and primary diagnosis	

Patient Survival by Modality and Primary Diagnosis

Figure A.5.1	78
Adjusted survival (cohort 1995-1999): Incident dialysis patients and patients receiving a first transplant in the calendar year from day 91, by modality, adjusted for age, gender and primary diagnosis	
Figure A.5.2	78
Adjusted survival (cohort 1995-1999): Incident haemodialysis patients from day 91, by primary diagnosis, adjusted for age and gender	
Figure A.5.3	78
Adjusted survival (cohort 1995-1999): Incident peritoneal dialysis patients from day 91, by primary diagnosis, adjusted for age and gender

I Introduction

Figure 1: National and regional registries that contributed data to this Annual Report

I Introduction

The ERA-EDTA Registry collects data on renal replacement therapy (RRT) via the national and regional renal registries in Europe.

This 2004 ERA-EDTA annual report includes information based on 59 registries from 30 countries. The data are presented in two parts: section A (chapter II) and section B (chapter III). Section A contains data from those 33 national and regional registries from 12 countries that provided individual patient data (shown in red in Figure 1). Section B relates to 38 national and regional registries from 20 countries providing aggregated data based on individual patient data, centre questionnaire data or information from health authorities (shown in orange in Figure 1).

Chapter overview

Chapter II (Section A) contains data on incidence, prevalence and survival as well as data on expected remaining life times from those registries providing individual patient data. Chapter III (Section B) contains data on incidence and prevalence from the countries providing aggregated data.

Chapter IV describes the methods used, including data collection and preparation, definitions and coding systems. In addition, it describes the statistical methods used to calculate incidence and prevalence, patient and graft survival and expected remaining lifetimes.

New to this edition

The method section of the annual report was extended to provide more insight into the Registry's methods and procedures. A new table (A.4.12) was added, providing the transplantation activity per million population. Starting this annual report the adjustment of incidence and prevalence for age and gender will use the EU25 population of the year 2000 as the reference population instead of the previously used EU15 population of 1995 [1].

ERA-EDTA Registry website

PDF files of the ERA-EDTA Annual Reports, published papers and other information of the Registry can be downloaded from the website of the ERA-EDTA Registry, www.era-edta-reg.org. This website also includes a repository of educational publications and presentations concerning epidemiology and biostatistics.

A5 SURVIVAL PROBABILITY
Patient Survival by Modality and Primary Diagnosis

Figure A.5.1
Adjusted survival (cohort 1995-1999):
Incident dialysis patients and patients receiving
a first transplant in the calendar year
from day 91, by modality,
adjusted for age, gender and primary diagnosis

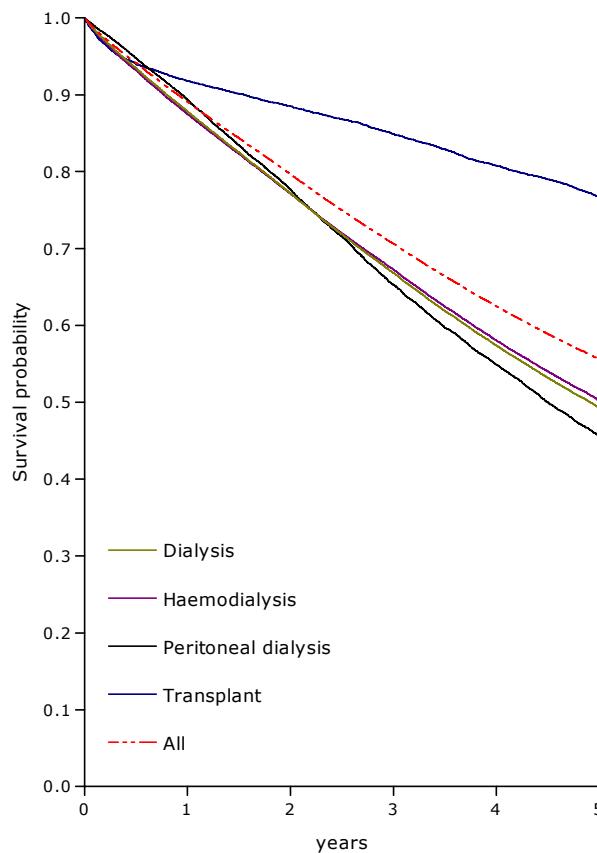

Figure A.5.2
Adjusted survival (cohort 1995-1999):
Incident haemodialysis patients
from day 91, by primary diagnosis,
adjusted for age and gender

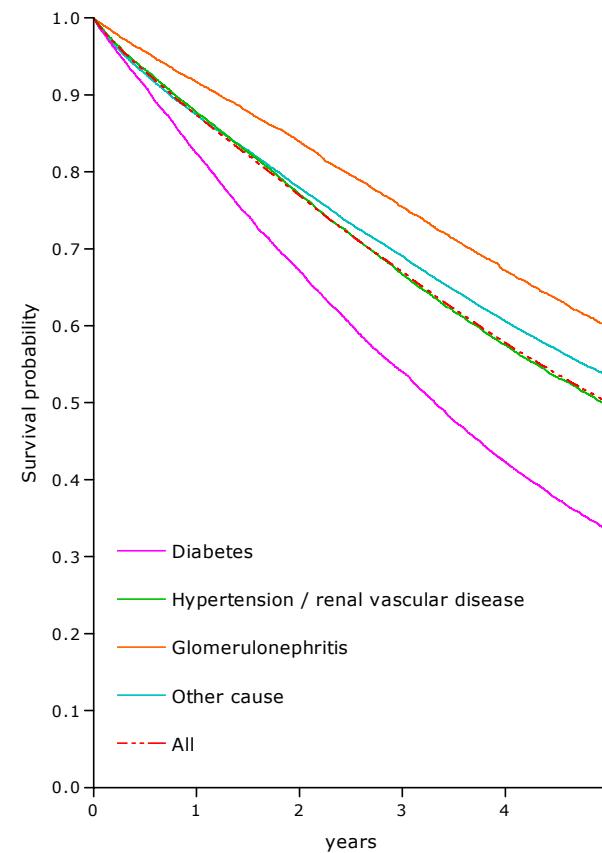

Figure A.5.3
Adjusted survival (cohort 1995-1999):
Incident peritoneal dialysis patients
from day 91, by primary diagnosis,
adjusted for age and gender

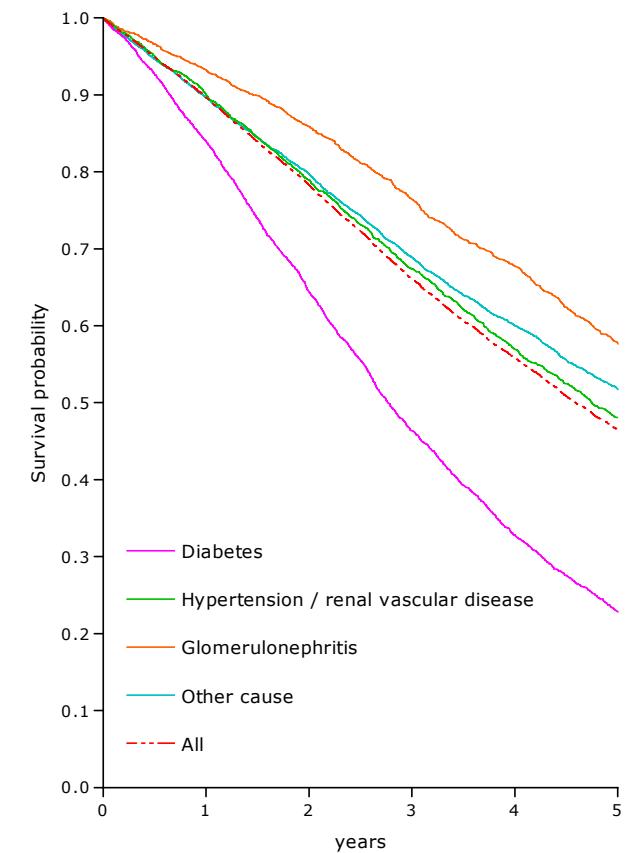

Table A.6.1

Expected remaining lifetimes (years) of the general population in 2000 in the participating European countries, and of prevalent dialysis and transplant patients in 2003 and 2004 (includes mortality in the first 90 days) by age and gender

Age	General population in the participating European countries			Age	ESRD: Dialysis			ESRD: Transplant		
	All	Men	Women		All	Men	Women	All	Men	Women

IV Methods

IV Methods

The ERA-EDTA Registry is located in the Department of Medical Informatics in the Academic Medical Center in Amsterdam, The Netherlands. This department hosts several clinical registries which share a Quality management system with Standard Operating Procedures (SOPs) for data collection, data storage, data analysis and the production of the annual report. This Quality management system received ISO 9001:2000 certification in 2005.

Data collection and preparation

Section A

Data collection

Once a year data sets containing individual patient data are sent to the Amsterdam office of the ERA-EDTA Registry. Data delivery takes place in one of the Open DataBase Connectivity (ODBC) compatible file formats, like Microsoft Access, Microsoft Excel, FoxPro, Paradox or Dbase or in other formats like text, SPSS or SAS. Collaborating registries send data in different ways (floppy disks, CD's or over the internet, etc.). Most data sets are received in PGP encrypted format.

Variables

The ERA-EDTA Registry asks national / regional registries for the data in table 1.

Table 1: Variables collected for Section A

Patient data	Transaction data
Patient identifier	Patient identifier
Country of Registry	Date of event
Date of birth	Type of event / treatment
Gender	Cause of death
Primary Renal Disease	Treatment centre
Date of first RRT	Source registry
	Destination registry

Collaborating registries and participating countries

Individual patient data of 33 national and regional registries from 12 countries are used to prepare the tables in Section A of this annual report. The databases serving as a basis for the analyses in Section A were received on the dates shown in Table 2.

Registry data are subject to continuous alteration and improvement. Small differences between ERA-EDTA Registry data and the data presented in the national / regional registry's own annual reports may therefore result from different times of data extraction.

In this annual report two new Spanish regional registries (Aragon and Andalusia) and one new Italian regional registry (Lombardy) participated in Section A.

This year data presented on Italy in section A of this report cover 55% of the total Italian population and are based on 13 of 20 regions, including Abruzzi, Basilicata, Calabria, Emilia-Romagna, Liguria, Lombardy, Marche, Piedmont, Sardinia, Trentino-Alto Adige, Tuscany, Valle d'Aosta and Veneto. For the regions Emilia-Romagna and Calabria it was not possible to participate in this report with recent data. The data of these two regions were however included in the tables and figures on survival.

Table 2: Dates on which the data sets of participating national and regional registries used as a basis the information in Section A were received

Registry	Date
Austria	31 October 2005

Sweden	14 December 2005
The Netherlands	23 February 2006
United Kingdom, England/Wales	6 March 2006
United Kingdom, Scotland	8 April 2006

Differences between collaborating registries

Definitions and collection of data

In the comparison of data between registries it should be recognized that there may be small differences between registries in definitions and in the collection of their data. For example, the different registries do not all collect data at the same level of detail, especially with regard to the different subtypes of the treatment modalities.

Patient population

The data from Belgium (Dutch-speaking), Belgium (French-speaking), Spain (Cantabria), Spain (Castile and Leon), Spain (Castile-La Mancha) and the United Kingdom (England/Wales) only comprise patients older than 20 years of age. It has been estimated that inclusion of data on children would add 2 Pmp to the incidence rate and 13 Pmp to the prevalence.

Data loading and cleaning

The registry data are imported using an in-house developed import utility. This program first uniforms the data and then translates any non-standard codes. Consistency checks are performed, and thereafter the data are converted to the desired format in order to make storage in the relational and event-driven database possible. The new data, annually provided by national and regional registries, replace all existing data in the ERA-EDTA Registry database. Changes in the data sets made by the national or regional registries are in this way adopted by the ERA-EDTA Registry. The import-program performs extensive logging and the logging-results are used to provide the national and regional registries with feedback concerning inconsistencies, or other problems in the data.

After data analysis the results are compared to the annual reports published by the national or regional registries as a first check for errors. In case of discrepancies the registry is contacted and potential problems regarding (the interpretation of) their data set are resolved. Thereafter, more detailed reports are produced which need the approval from the registries before publication in the ERA-EDTA Annual Report.

ERA-EDTA registry database

Microsoft SQL Server (a database management system) is used to manage the ERA-EDTA Registry database. This relational and event-driven database consists of a patient and a transaction table which can be extended according to future needs.

General population data

Midyear population data of the contributing countries are provided by Eurostat, the national bureaus of statistics or the national or regional registry. The sources of the population data used for the analyses in section A are shown in Table 3.

Table 3: Sources of the general population statistics of the participating national and regional registries in Section A

Section B

Data collection

Section B relates to national and regional registries from countries providing the ERA-EDTA Registry with aggregated data. Data were provided via a Microsoft Excel template and imported for inclusion in this annual report.

Collaborating registries

Aggregated data from 38 national and regional registries from 20 countries are used for the preparation of the tables in section B (see Figure 1). The following countries participated in section B of this year's annual report: Bosnia-Herzegovina, Bulgaria, Croatia, Czech Republic, Estonia, France, FYR of Macedonia, Germany, Italy, Latvia, Poland, Portugal, Romania, Russia, Serbia and Montenegro, Slovakia, Slovenia, Spain, Tunisia and Turkey.

Data from France are based on 9 of 24 regions, including Auvergne, Bretagne, Champagne-Ardenne, Languedoc-Roussillon, Limousin, Lorraine, Nord-Pas de Calais, Provence-Alpes-Côte d'Azur and Rhône-Alpes, whereas the data of Spain are based on 11 of 19 regions, including Andalusia, Aragon, Basque country, Cantabria, Castile and Leon, Castile-La Mancha, Extremadura, La Rioja, Navarra, Valencian region and on the overseas city Ceuta.

Differences between collaborating registries

For the French data it was assumed that patients with a functioning graft with unknown residence lived in the same region as the one where they were followed.

Data loading and cleaning

The Microsoft Excel templates used for data collection included automated consistency checks. Additional checks were performed manually and footnotes were added, where needed.

General population data

The population data needed for the calculation of incidence rates and prevalence per million population (Pmp) were reported by the collaborating registries.

Reference population

The age and gender distribution of the EU25 of 2000 as provided by Eurostat was used for the adjustment of incidence rates and prevalence [1]. The age and gender distribution of EU25 (2000) is shown in Table 4.

Definitions and coding systems

The definitions given below apply to both section A and B.

Incidence and prevalence

Incidence is the number of new cases of a condition during a specific period of time which, in this annual report, is a year. Prevalence is the number of people in a given population with a particular disease at a given time, in this annual report this is at December 31st.

Primary cause of renal failure

Renal diseases were defined according to the ERA-EDTA coding systems and subsequently classified into groups (Appendix 1).

Causes of death

Causes of death were defined according to the ERA-EDTA coding systems and subsequently classified into groups (Appendix 2).

Treatment modalities

Appendix 3 provides an overview of the coding currently used for treatment modalities in the ERA-EDTA database.

Statistical analyses

Section A

Sas 9.0

For the data analyses SAS 9.0 [2] was chosen because this software is able to maintain large datasets, is syntax driven which increases reproducibility of results and has extensive capabilities with respect to statistics and data management.

Incidence and prevalence

Methods for calculating incidence and prevalence

Incidence and prevalence of those alive and on RRT on day 1 and day 91, are calculated for the total population and for subgroups by i.e. gender, age group, treatment modality and cause of renal failure. The incidence or prevalence per million population (Pmp) is the observed incident or prevalent count divided by the general population in that year and multiplied by one million. The general (midyear) population data for the year 2004 were provided by Eurostat, the national bureaus of statistics or the national or regional registry (see data collection and preparation).

Adjustment of incidence and prevalence

Differences in unadjusted incidence and prevalence might be due to the differences in the age and gender distribution of the general population. The EU25 age and gender distribution of the European population was used to adjust incidence and prevalence for age and gender. Adjusted rates are derived by applying the weights of a reference population to the observed variable-specific rates (e.g. incidence rate per age group) in a country. This weighted average provides for each country a single summary rate that would be expected if that country had the age and gender distribution of the reference population.

The following is an example of how to calculate age adjusted incidence. In this example the incidence rate of country A in 2004 is 269 per million population, the age-specific rates of country A and the reference population distribution with respect to age are shown in Table 5.

Table 5: Calculation of the adjusted incidence rate

Age groups	Incidence rate country A Pmp	Reference population %
0-25	332	31.7
25-50	261	39.3
50-75	64	29.0
Total	269	100

The adjusted incident rate of country A in 2004 is:

$$(0.317 * 332) + (0.393 * 261) + (0.29 * 64) = 226 \text{ Pmp}$$

Transplantation activity

For all participating countries and regions the number of renal transplants performed during the year was presented by donor type. In Iceland the number of transplants is extremely low because most patients receive transplants in other countries. Rates are expressed as numbers, percentages and per million population (Pmp).

Survival probability

In the annual report overall patient survival, patient survival by treatment modality and graft survival are presented in tables by age, gender and primary renal disease and in figures. The individual patient data of 26 national and regional registries from 12 countries were included in the survival analyses, as some other countries did not cover the (entire) required period of time.

Survival was analyzed from day 1 and from day 91 onwards for those patients alive and on RRT on those days [4]. For the analysis of survival data two five-year cohorts were used:

- 1995-1999 - for the presentation of 90-day, one-, two- and five-year survival probabilities.
- 1998-2002 - for the presentation of 90-day, one- and two-year survival probabilities.

These analyses were based on data from Austria, Belgium (Dutch-speaking), Belgium (French-speaking), Denmark, Finland, Greece, Iceland, Italy (Basilicata), Italy (Calabria), Italy (Emilia-Romagna), Italy (Lombardy), Italy (Marche), Italy (Piedmont), Italy (Sardinia), Italy (Tuscany), Italy (Veneto), Norway, Spain (Andalusia), Spain (Basque country), Spain (Cantabria), Spain (Catalonia), Spain (Valencian region), Sweden, The Netherlands, United Kingdom (England/Wales) and United Kingdom (Scotland).

With regard to the inclusion of data, some further comments need to be made. Firstly, the data were used from the date from which they were available, which in a small number of cases was later than the first survival cohort year, this being due to the fact that the national or regional registry was established at a later date. Secondly, the differences between the survival probabilities of this annual report and survival probabilities published in earlier annual reports of the ERA-EDTA Registry may be partly due to differences in the number of participating countries.

For the different types of survival analysis the events and censoring were defined as shown in Table 6.

Table 6: Overview of the events and censoring as defined for the survival analyses in Section A

Survival type	Event	Censoring
Patients on renal replacement therapy	Death of patient	Recovery of renal function Loss to follow-up End of follow-up time
Patients on dialysis	Death of patient	Transplantation Recovery of renal function Loss to follow-up End of follow-up time
First transplant recipients	Death of patient	Loss to follow-up End of follow-up time
First graft	Death of patient Graft failure	Loss to follow-up End of follow-up time

Unadjusted survival probabilities

Unadjusted survival probabilities are calculated using the Kaplan-Meier method, and corresponding confidence intervals are calculated according to Bie et al [4]. Survival probabilities are presented as percentages from 0 to 100. In unadjusted survival analysis the cells in the tables were left blank when there were less than 30 patients in that cell.

Adjusted survival probabilities

The Cox Regression model is used to compare the survival between groups while accounting for confounders [5]. Survival probabilities are adjusted for age, gender and primary renal disease. As the ERA-EDTA Registry database is still growing with respect to the coverage of European countries, it was decided to adjust for fixed values for a number of parameters in the survival analyses to make results more comparable across time periods. The fixed values of variables used for the survival tables are shown in Table 7.

Table 7: Overview of the parameters values used to adjust the survival probabilities in Section A

Survival type	Age	Gender	Renal disease
Patients on renal replacement therapy	60 years	60% men	20% Diabetes 17% Hypertension / renal vascular disease 15% Glomerulonephritis 48% Other cause
Patients on dialysis	60 years	60% men	20% Diabetes 17% Hypertension / renal vascular disease 15% Glomerulonephritis 48% Other cause
First transplant recipients (cadaver donor)	45 years	60% men	10% Diabetes 8% Hypertension / renal vascular disease 28% Glomerulonephritis 54% Other cause
First transplant recipients (living donor)	45 years	60% men	10% Diabetes 8% Hypertension / renal vascular disease 28% Glomerulonephritis 54% Other cause
First graft (cadaver donor)	45 years	60% men	10% Diabetes 8% Hypertension / renal vascular disease 28% Glomerulonephritis 54% Other cause
First graft (living donor)	45 years	60% men	10% Diabetes 8% Hypertension / renal vascular disease 28% Glomerulonephritis 54% Other cause

In the adjusted survival analyses, cells with less than 30 events were left empty. Patients for whom age, gender, or primary renal disease was missing were excluded.

Survival figures

In the Figures A.5.1 to A.5.3 survival was adjusted for age 60 years and gender 60% men. In addition, Figure A.5.1 was adjusted for renal disease distribution: 20% Diabetes; 17% Hypertension / renal vascular disease; 15% Glomerulonephritis and 48% Other cause.

Expected remaining lifetimes

Expected remaining lifetimes represent the average number of years of life remaining for persons who have reached a given age. In this annual report expected remaining lifetimes are calculated for RRT patients and for the general population.

General population

The death rates per 100.000 population by gender and age of the general population of the contributing countries were provided by Eurostat. The size of the contribution of each country to the general population that was used to calculate expected remaining lifetimes was in proportion to the size of the general population covered by its renal registry.

RRT population

The expected remaining lifetimes for RRT patients are presented by age, gender and treatment modality. To be able to calculate expected remaining lifetimes we used data from 1991 onwards. Consequently, the data of the following 17 national and regional registries from 12 countries were suitable for this analysis: Austria, Belgium (Dutch-speaking), Belgium (French-speaking), Denmark, Finland, Greece, Iceland, Italy (Piedmont), Italy (Lombardy), Norway, Spain (Andalusia), Spain (Basque country), Spain (Catalonia), Spain (Valencian region), Sweden, The Netherlands and United Kingdom (Scotland). The expected remaining lifetime for a certain patient group is the average of the remaining life expectancies for the patients in that group. Although this can not be known till all the patients in the group have died, the expected remaining lifetime can be projected by assuming that patients in the patient group will die at the same rates as those observed among older groups of recently prevalent RRT patients. For the calculation of expected remaining lifetimes of the patients and the general population the methodology of the USRDS was adopted. [6]

Section B

Incidence and prevalence counts are provided by the contributing registries themselves. To increase consistency of data, a general explanation of how to complete the Microsoft Excel template and how to calculate adjusted incidence and prevalence was provided to support the participating registries.

V Appendices

Appendix 1 - Grouping of primary renal diseases

Primary renal disease	1994 code	1995 code	PRD group
Glomerulonephritis; histologically NOT examined	10	10	I
Focal segmental glomerulosclerosis with nephrotic syndrome in children	11	11	I
IgA nephropathy (proven by immunofluorescence, not code 76 and not 85)	12	12	I
Dense deposit disease; membrano-proliferative GN; type II (proven by immunofluorescence and/or electron microscopy)	13	13	I
Membranous nephropathy	14	14	I
Membrano-proliferative GN; type I (proven by immunofluorescence and/or electron microscopy -not code 84 or 89)	15	15	I
Crescentic (extracapillary) glomerulonephritis (type I, II, III)	16	16	I
Focal segmental glomerulosclerosis with nephrotic syndrome in adults	17	17	I
Glomerulonephritis; histologically examined, not given above	19	19	I
Pyelonephritis cause not specified	20	20	II
Pyelonephritis associated with neurogenic bladder	21	21	II
Pyelonephritis due to congenital obstructive uropathy with/without vesico-ureteric reflux	22	22	II
Pyelonephritis due to acquired obstructive uropathy	23	23	II
Pyelonephritis due to vesico-ureteric reflux without obstruction	24	24	II
Pyelonephritis due to urolithiasis	25	25	II
Pyelonephritis due to other cause	29	29	II
Interstitial nephritis (not pyelonephritis) due to other cause, or unspecified (not mentioned above)	30	30	VII
Nephropathy (interstitial) due to analgesic drugs	31	31	VII
Nephropathy (interstitial) due to cis-platinum	32	32	VII
Nephropathy (interstitial) due to cyclosporin A	33	33	VII
Lead induced nephropathy (interstitial)	34		VII
Drug induced nephropathy (interstitial) not mentioned above	39	39	VII
Cystic kidney disease - type unspecified	40	40	VII
Polycystic kidneys; adult type (dominant)	41	41	III
Polycystic kidneys; infantile (recessive)	42	42	VII
Medullary cystic disease; including nephronophthisis	43	43	VII
Cystic kidney disease - other specified type	49	49	VII
Hereditary / Familial nephropathy - type unspecified	50	50	VII
Hereditary nephritis with nerve deafness (Alport's Syndrome)	51	51	VII
Cystinosis	52	52	VII
Primary oxalosis	53	53	VII
Fabry's disease	54	54	VII
Hereditary nephropathy - other specified type	59	59	VII
Renal hypoplasia (congenital) - type unspecified	60	60	VII
Oligomeganephronic hypoplasia	61	61	VII
Congenital renal dysplasia with or without urinary tract malformation	63	63	VII
Syndrome of agenesis of abdominal muscles (Prune Belly)	66	66	VII
Renal vascular disease - type unspecified	70	70	V
Renal vascular disease due to malignant hypertension	71	71	IV
Renal vascular disease due to hypertension	72	72	IV
Renal vascular disease due to polyarteritis	73	73	VII
Wegener's granulomatosis	74	74	VII
Glomerulonephritis related to liver cirrhosis	76	76	VII
Cryoglobulinaemic glomerulonephritis	78		VII
Renal vascular disease - due to other cause (not given above and not code 84-88)	79	79	V
Diabetes glomerulosclerosis or diabetic nephropathy - Type I	80	80	VI
Diabetes glomerulosclerosis or diabetic nephropathy - Type II	81	80	VI
Myelomatosis / light chain deposit disease	82	82	VII
Amyloid	83	83	VII
Lupus erythematosus	84	84	VII
Henoch-Schoenlein purpura	85	85	VII
Goodpasture's Syndrome	86	86	VII
Systemic sclerosis (scleroderma)	87	87	VII
Haemolytic Uraemic Syndrome (including Moschcowitz Syndrome)	88	88	VII
Multi-system disease - other (not mentioned above)	89	89	VII
Tubular necrosis (irreversible) or cortical necrosis (different from 88)	90	90	VII
Tuberculosis	91	91	VII
Gout	92	92	VII
Nephrocalcinosis and hypercalcaemic nephropathy	93	93	VII
Balkan nephropathy	94	94	VII
Kidney tumour	95	95	VII
Traumatic or surgical loss of kidney	96	96	VII
Other identified renal disorders	99	99	VII
Chronic renal failure; aetiology uncertain	00	00	VIII

PRD group: I: glomerulonephritis / sclerosis; II: pyelonephritis; III: polycystic kidneys, adult type; IV: hypertension; V: renal vascular disease; VI: diabetes; VII: miscellaneous; VIII: unknown

Appendix 2 - Grouping of causes of death

Cause of death	1994 code	1995 code	COD group
Cause of death uncertain / not determined	0	0	XI
Myocardial ischaemia and infarction	11	11	I
Hyperkalaemia	12	12	X
Haemorrhagic pericarditis	13	13	X
Other causes of cardiac failure	14	14	II
Cardiac arrest / sudden death; other cause or unknown	15	15	III
Hypertensive cardiac failure	16	16	II
Hypokalaemia	17	17	X
Fluid overload / pulmonary oedema	18	18	II
Pulmonary embolus	21	21	X
Cerebro-vascular accident, other cause or unspecified	22	22	IV
Gastro-intestinal haemorrhage	23	23	X
Haemorrhage from graft site	24	24	X
Haemorrhage from vascular access or dialysis circuit	25	25	X
Haemorrhage from ruptured vascular aneurysm (not code 22 or 23)	26	26	X
Haemorrhage from surgery (not code 23, 24 or 26)	27	27	X
Other haemorrhage (not codes 23-27)	28	28	X
Mesenteric infarction	29	29	X
Pulmonary infection (bacterial - not code 73)	31	31	V
Pulmonary infection (viral)	32	32	V
Pulmonary infection (fungal or protozoal; parasitic)	33	33	V
Infections elsewhere except virus hepatitis	34		V
Septicaemia	35	35	V
Tuberculosis (lung)	36	36	V
Tuberculosis (elsewhere)	37	37	V
Generalized viral infection	38	38	V
Peritonitis (all causes except for Peritoneal Dialysis)	39	39	V
Liver disease due to hepatitis B virus	41	41	X
Liver disease due to other viral hepatitis	42	42	X
Liver disease due to drug toxicity	43	43	X
Cirrhosis - not viral	44	44	X
Cystic liver disease	45	45	X
Liver failure - cause unknown	46	46	X
Patient refused further treatment for ESRF	51	51	VI
Suicide	52	52	VI
ESRF treatment ceased for any other reason	53	53	VII
ESRF treatment withdrawn for medical reasons		54	VII
Uremia caused by graft failure	61		X
Pancreatitis	62	62	X
Bone marrow depression	63	63	X
Cachexia	64	64	VIII
Malignant disease, possibly induced by immunosuppressive therapy	66	66	IX
Malignant disease: solid tumors except those of 66	67	67	IX
Malignant disease: lymphoproliferative disorders except those of 66		68	IX
Dementia	69	69	X
Peritonitis (sclerosing, with peritoneal dialysis)	70	70	V
Perforation of peptic ulcer	71	71	X
Perforation of colon	72	72	X
Chronic obstructive airways disease	73	73	X
Accident related to ESRF treatment (not 25)	81	81	X
Accident unrelated to ESRF treatment	82	82	X
Peritonitis (bacterial, with peritoneal dialysis)		100	XI
Peritonitis (fungal, with peritoneal dialysis)		101	V
Peritonitis (due to other cause, with peritoneal dialysis)		102	V
Other identified cause of death	99	99	V

COD group: I: myocardial ischaemia and infarction; II: heart failure; III: cardiac arrest, other cause / unknown; IV: cerebrovascular accident; V: infection; VI: suicide / refusal treatment; VII: withdrawal; VIII: cachexia; IX: malignancies; X: miscellaneous; XI: unknown / unavailable

Appendix 3 - Treatment modalities

Event	Event code
Home haemodialysis001
